Deskman

Deskman is your home assistant. Talk with him, set reminders, and make video calls.

Talking to Deskman

- Say **"deskman"** or **"number"** plus his number, then your request: *"deskman, what time is it?"*
- After a reply you can keep talking for 20 seconds without the name.
- He cannot hear you while he is speaking, wait for him to finish.
- Say *"be quiet"* to put him back to idle.

Modes

- **Local**: Runs on the robot, no internet needed.
- **Cloud**: OpenAI for answers, faster and smarter.
- **Realtime**: OpenAI hears and speaks directly, most natural.

What he can do

- **Watch**: His eyes follow your face using the camera, and his head follows you when he is listening.
- **Look**: Say *"look left"*, *"look right"*, *"look up"*, *"look down"*, and *"look center"* to move his head.
- **Time**: Say *"what time is it?"*, or *"how many days until December 15"*.
- **Volume**: Say *"volume 80"* to set a percent of volume.
- **Remember**: Say *"remember my name is Tom"*, and he will remember your name over power restarts.
- **Remind**: Say *"remind me at 10 PM for bedtime"* for a daily spoken reminder.
- **Videos**: Say *"record a video"*, or *"play a video"*.
- **Status**: Say *"how is your battery?"*, or *"what system are you running on?"*
- **Calls**: Call robot to robot, or from a web browser, at `https://teleportconnect.com/teleport`
- **Calendar**: Connect your calendar using the tool script.

The touch menu

Tap the button on the right of the status bar. The mode row (Local, Cloud, Realtime) shows along the bottom.

Listen	Turn voice listening on or off.
Camera	Show or hide the camera preview with face tracking.
Record	Start recording a video, tap Stop to finish.
Videos	Play or delete saved recordings.
Call	Start a video call.
Settings	Opens a column to the left with Demo, Move, Audio, Volume, WiFi, and Exit.
Demo	Stays listening, looks around every 30 seconds, volume 80%, goes green.
Move	Sweeps the servos.
Audio	Microphone and speaker test.

Get on WiFi

1. Tap the menu, then **Settings**, then **WiFi**.
2. Tap your network in the list.
3. Type the password and confirm.
4. Top line shows `WiFi: name` when connected.

Local needs no WiFi. Cloud and Realtime need internet.

Connect by SSH

Address is at the top of the WiFi screen:

```
ssh deskman@deskman4.local
```
Password: **deskman**

- Use your robot's name instead of **deskman4**.
- Cursor or Claude Code: use the same address.

Handy commands

`tail -f robot/log.txt`	Show the log on screen
`robot/restart_services.sh`	Restart the robot and video call services, no password
`cd talk && ./talk.py`	Run the voice program by hand
`sudo service robot stop`	Stop the robot first if one is running

Deskman runs on a Jetson Orin Nano or Raspberry Pi 5. Website: teleportconnect.com
